操作定義

The probability of child born in a specific year dying before reaching the age of five. It is derived from a life table and expressed as rate per 1,000 live births.

備註

All figures are collected from Department of Health since 1991.
Figure for 1998 is obtained from the Census and Statistics Department.

Further to DH (27Jun2009), the population-related figures are compiled based on the population estimates under the "resident population" approach. Also, the Population By-census conducted in July to August 2006 provides a benchmark for revising the population estimates compiled since the 2001 Population Census.
